

Biological Thought Process
Dialog between The Human and The Computer
Finding, Understanding and Interpretation of Information
Cognitive, Spontaneous Learning and Knowledge Formation

Interfacing with ai-one™

Joint intelligence forces: To date, intelligent systems always have to be focused on one very narrow aspect, such as fingerprint recognition, semantic ability, profiling, image recognition etc.

The new *ai-one™* technology can be easily combined with existing applications. *ai-one™* is to be viewed as the foundational technology to build on. A simple communication interface enables vendors to use the ingenious functions of the *ai-one™* foundation. Vendors are enabled to migrate their intelligence in their applications or their business logic to *ai-one™*

Migration with existing data bases or services is also very simple. Through a standardized interface protocol, communication is easily established.

The technology enables new solutions in the complexity of today's business processes and information needs. The accurate/relevant information delivered to the right place at the right time, and enabled for an intelligent dialogue, is the key for automated processes. *ai-one™* offers true intelligence in business and event driven solutions.
